### **New Client Attributes Choice of HCS INTERACTANT™ to Functionality and Completeness of Solution**

**Farmingdale, NJ (April 2009)**- A market leader and developer of healthcare information systems, Health Care Software Inc. (HCS), has announced that Encore Healthcare, LLC, a full service healthcare management company, has selected HCS's **INTERACTANT™** enterprise software solution. According to Encore, which operates 31 facilities in ten states, the decision was based on **INTERACTANT's** complete suite of applications and high overall quality.

The addition of five new, long-term acute care hospitals set Encore in search of a new software package more than a year ago. "We were looking for a complete integrated enterprise-wide software package," said Matthew Auman, Chief Operating Officer of Encore Healthcare. At the end of the 12-month selection process, **INTERACTANT** clearly stood out according to Auman. "We selected HCS's **INTERACTANT** solution because it was easily the most functional and the reporting was the best by a long shot," said Auman. "The revenue cycle side will have an increase in productivity immediately," he said.

HCS's premier software package, **INTERACTANT**, is a web-based, centralized architecture solution. Offering a complete suite of applications for clinical, financial, and revenue cycle management, including electronic medical records, **INTERACTANT** supports multi-site LTCH's, inpatient, outpatient and skilled nursing facilities nationwide.

Tom Fahey, President of HCS, noted the importance of providing a robust solution customized to meet each client's requirements. "**INTERACTANT** provides powerful, customizable functionality and flexible applications combined with personalized and responsive client support," he said. "We're very excited to provide this combination of features to Encore Healthcare," Fahey said, "and we look forward to a successful, long-term relationship."
